

SEBRING BONNET

The Sebring design offers all the same advantages but its form is less aerodynamic. Both bonnets incorporate radiator cowlings and accept original lighting equipment. The original radiator grille is fitted to the Sebring bonnet but none is required for the Monza. A small plastic insert grille is available for this as an extra. Fitting is extremely simple and the only modification required to the

body involves the fitting of two spring fasteners — one on each side. Speedwell fibreglass bonnets are supplied ready to fit but due to the difficulty of matching body colours they are unpainted and should be stoppered, primed and cellulosed to match the existing paintwork.

Specification

Material: Polyester resin reinforced glass fibre

Metal Parts: Mild steel hinges - rust protected. Hooks - chrome plated.
