

Weston Speedwell 10,000 RPM rev counter available as of 14th April 2017!!!

Original manufacturer case- £245.00

Rev counter built up using an original case. The 10,000 RPM Weston Speedwell gauge was a rare option in period. Our dial is a very close replica and when combined with a genuine manufacturer case is virtually indistinguishable from an original unit. Performance from our aircraft grade moving coil movement is excellent. Accuracy and needle stability is very good with this unit showing accuracy of 1% FSD. Tested with Accuspark electronic ignition and conventional points system. Reverse polarity, transient and load dump protection incorporated. Internal voltage stabilisation to prevent varying battery voltage affecting readings. We employ a microprocessor calibration unit with every gauge is individually calibrated. Ideal for historic racing where a period instrument is required.
